

WÜRTH Industrie Service

SUPPORT BEYOND THE PART

Through our global network, engineering and technical support, quality control, and additive manufacturing and digital inventory solutions, we offer support to our customers beyond the assembly parts that we supply.

We provide end-to-end process support that is customized to your organization and applications, helping you optimize your systems to save costs and increase efficiency.

Global Network

Family-owned and privately held since 1945, the Würth Group spans over 80 countries and more than 83,000 team members. Our access to global knowledge and resources provides us with a network of stability and a breadth of expertise. At the same time, our local teams cultivate personal relationships and understanding to ensure that each customer's needs are met.

Engineering & Technical Support

Our Engineers and Technical Specialists provide you with vast industry knowledge, personalized for your applications so that you can concentrate on your core objectives. Our team partners with you from design to final assembly to reduce waste, eliminate errors, and drive down costs through product reviews, line walks, ergonomic and process flow improvements, part consolidation efforts, and more.

Additive Manufacturing & Digital Inventory Solutions

Our additive manufacturing (also known as industrial 3D printing) solutions provide our customers with expedited development times, increased efficiency and adaptability, and a reduced environmental footprint. We connect physical and digital inventory by allowing customers to keep an inventory of part files that can be printed on-demand, any time, without waiting for the parts to come through the supply chain or physically stocking them. Our product of erings include industrial 3D printers, consumables, and 3D scanners, and our services include 3D engineering support and training for your team.

Quality Control

Würth Integrated Quality is comprised of a network of over 25 Supplier Quality Engineers in North and South America, Europe, and Asia. Our Quality Engineers ensure the quality of the parts we supply, inspecting, documenting, and tracing each lot of parts from their manufacture all the way to the point when they depart our distribution centers to be received by customers.

We can provide you with a custom quality program to ensure that your specifications are met, of ering quality control from simple dimensional layouts and certificates of conformance to complex and in-depth requirements. Thanks to clear documentation and specifications for our business processes, we ensure reliable processes, secure supply, and consistently high product quality.
